INFO@PRYDE-GROUP.DE

Pryde Group Europe introduced the Purchasing Bible in 2013, the aim was to make your purchasing with the Pryde Group as simple and clear as possible. Over the last two years the product book has grown steadily and we believe that we are on the right track, the positive feedback we received has been amazing and we plan on bringing you more in 2015!

The 2015 product book contains all of our brands such as NP Surf, NeilPryde, JP Australia, Cabrinha and Imagine, which are divided into categories and product groups.

New for this year we have added the category „Children“, in which all items specifically for children and young people are clearly summarized. The product sorting is very clear and structured in the categories of: Water Wear, Windsurfing, Kitesurfing, SUP and Accessories.

We have revised the Water Wear category, which has made it easier to navigate through. The areas of Windsurfing, Kitesurfing, SUP, Accessories, Kids, Spare Parts and Promo Wear / Marketing then follow as on as before.

We are using the icons such as „Top Seller“, „New“ and „Test Winner“ again, they are there to help you identify our main products, which will help your future buying decisions.

The 2015 product collection is by far the most refined collection we have ever had. We hope you agree!

**We are looking forward to a new, windy season and wish you lots of fun discovering many of our products in this amazing new 2015 purchasing bible.**

# WATERWEAR

NEOPRENE

---

*Like nothing else*

## APEX-PLUS

### NEOPRENE ULTRA STRETCH

#### DOUBLE-LINED

All-new silky smooth neoprene with 25% more stretch. Apex-Plus is made from Apex Lite core laminated with a unique, silky outer jersey containing more spandex for flexibility and a soft hand feel.

The Apex Lite core is infused with more microscopic air bubbles making it stretchier, warmer and lighter than traditional neoprene.

#### MATERIAL

#### FIRELINE

FIRELINE is an exclusive, ultra-warm, feather- light and stretchy insulation lining. Consisting of brushed, quick-dry polypropylene lines knitted over jersey, it feels soft and warm to touch.

The brushed surface absorbs moisture which, when heated by your body, creates a warming greenhouse effect inside the suit. Combination of the thin, ultra-stretchy jersey base and the line structure of polypropylene make Fireline feather-light and very flexible, aiding maneuverability.

When the suit is drying, the wicking property of the brushed polypropylene allows the lining to dry rapidly so that you can be back in the water in no time.

#### MATRIX S<sup>5</sup>

Limestone based S5 with the addition of a 3D matrix of air chambers that trap heat and increase buoyancy and flexibility. Air pockets insulate the body the way double-paned windows insulate a house. The end result is a warmer and lighter suit without adding thickness.

#### S<sup>5</sup>

Limestone based neoprene from Yamamoto, Japan. This smooth closed cell neoprene has a unique hydrophobic coating that makes it 95% water permeable compared to 70% for standard neoprene. As a result, it sheds off more water, quicker. S5 also provides maximum wind chill predection with a 23% higher closed-cell ratio than standard neoprene.

#### MATRIX-MESH

Closed-cell neoprene with the addition of a 3D matrix of air chambers that trap heat and increases buoyancy and flexibility. Air pockets insulate the body the way double-paned windows insulate a house. The end result is a warmer and lighter suit without adding thickness.

#### APEX-MESH

Closed-cell neoprene with a waterproof, rubbery texture that cuts down wind-chill. The Apex Lite core is infused with 20% more microscopic air bubbles than traditional neoprene making it lighter. The unsealed inner side is laminated with a super stretch jersey for maximum flexibility.

## INSULATION

### FIRELINE

Fireline is an exclusive, ultra-warm, feather-light and stretchy insulation layer. Consisting of brushed, quick-dry polypropylene lines knitted over jersey, it feels soft and warm to touch. The brushed surface absorbs moisture which is then heated by your body creating a warming, greenhouse effect inside the suit.

### HEATLOCK

An ultra-lightweight inner lining comprised of a series of tubular, hollow yarns. Heatlock effectively traps and stores body heat within the cavity of the yarn, keeping you warmer and drier.

### BAMBOO CHARCOAL

Bamboo Charcoal fibers are woven into the lining for their anti-odor and anti-bacterial, warming and energizing properties.

### HOTCELL

Lightweight, quick drying polypropylene insulation. The cellular structure traps an insulating layer of warm water next to the skin, keeping the core temperature up.

## SEAMS

### P-SKIN

P-Skin is a thin, stretchy, non-stick poly-urethane seam-sealant that is applied to seams for maximum waterproofness. It's stretchier and thinner than the liquid seam often seen on other wetsuits. P-Skin is machine applied so it allows for a much neater finish than liquid seam.

### FLATLOCK

A strong durable self-locking stitch that is comfortable against the skin. The flatlock seam is water permeable implying it is generally used in warm water suits and tops.

### FLX ZONE

High stretch forward and lateral extension panels allow for natural, unrestricted movement.

### GLUED AND BLINDSTITCHED (GBS) SEAMS

An efficient, watertight seam created through a triple gluing process in conjunction with a blind stitch that does not fully penetrate the rubber. The technique allows precise curved seams and facilitates a snug, anatomically correct fit.

## ENTRY

### E4 ENTRY SYSTEM

A solid, dry seal. Pullover bib with a comfortable roll-neck seal that prevents water from entering through the neck opening and back zipper.

### E3 ENTRY

Pull-over bib that prevents water from entering through the back.

### VERTICAL BACK ZIPPER

Heavy-duty, double tooth YKK zipper to minimize water entry. With extended, easy-grab lanyard.

### HORIZONTAL FRONT ZIPPER

Heavy-duty, double tooth YKK zipper with a magnetic lock closure and elastic fastener that minimise water entry.

## EXTRAS

### AQUAVENTS

A water venting system in the ankles that releases water caught in the suit.

### GRIPLOCK WRISTS

Grippy silicone seal to prevent movement and water flushing in.

### DETACHABLE ANKLE CINCHES

Tightens around the ankles to prevent water from entering.

### VELCRO ATTACHMENT FOR ZIPPER PULL

To avoid zip pull from flapping while riding.

### ARMORTEX KNEEPADS

A highly durable, abrasion resistant, 4-way stretch material.

### ANKLE CINCH LOOP

Keeps ankle cinches in place to prevent water from entering.

### SCS NECK SEAL

Smooth skin neoprene forms a tight seal around the neck with maximum comfort.

### KEY POCKET WITH WAX COMB

A pocket with elastic loop to secure your keys and wax comb.

## DRYSUIT

### LUCIFER DRY SUIT

Four layers of insulation, each with a specific purpose, keep the Lucifer drysuit windproof, waterproof, and breathable. It looks like a smoking two-piece but is actually one, joined in the middle. Your harness fits inside the suit – out of sight and out of mind. And for those extra long sessions there is a "Pee-Zip" that lets you go when you gotta go.

#### Features

- S5 Limestone neoprene neck seal
- Removable hood
- Flexible dryzip across upper back
- Velcro wrist and ankle fasteners
- Ballistic nylon reinforcement on seat and ankle cuffs
- Latex wrist and ankle seals

## ELITE

The best of the best. Nothing moves like it, nothing feels like it. The Elite is NP's ultimate wind protection wetsuit that continues to lead the market in technological innovation. It provides the best insulation and stretch properties available thanks to a combination of top-end materials and specific integration of state-of-the-art-features.

### Features

- S5 Neoprene
- 100% P-Skin tape
- Bamboo Charcoal
- Glued and blindstitched (GBS) seams
- Anti-choke v-neck with S5 neck seal
- Double cuff wrists
- Reinforced crotch

## MISSION Front Zip (hooded)

The Mission FZ wetsuit was built for unrestricted freedom of movement and superior warmth. Designed for multi-sport use, it is constructed with stretchy Apex-Plus neoprene and features P-Skin taped seams and ultra warm Fireline insulation placed along the enlarged chest/upper-leg panel. The Mission wetsuit provides an ultimate combination of warmth and flexibility.

### Features

- Built-in neoprene hood with Bamboo Charcoal panels, visor and chin cover with elastic fastener
- Glued and blindstitched (GBS) seams
- Front zip with magnetic lock and elastic fastener
- Minimal seam design
- P-Skin tape
- Armortex 4-way stretch kneepads
- Griplock wrists and ankles
- Ankle cinch loop with detachable ankle cinches
- Key pocket with elastic loop and wax comb

## MISSION L/S TOP

The Mission 2mm top is the warmest neoprene top out there. It's made with our top of the line S5 limestone neoprene that absorbs almost no water compared to traditional neoprene. Thanks to its SCS nano coating, the Mission top sheds water five times faster than uncoated neoprene.

We have made this top so warm and windproof that most of our riders now use it instead of their regular spring suits.

### Features

- Elastic waist cord with boardshort attachment loop
- Zipperless
- Harness grip pad
- Flatlock seams

Thickness	Colour	Size	Code	SRP €*
2	C1 black	S/M/L/XL/XXL	143029/ MU C708	149,95

## MISSION VEST

The Mission 2mm vest is the warmest neoprene vest out there. It's made with our top of the line S5 limestone neoprene that absorbs almost no water compared to traditional neoprene. Thanks to its SCS nano coating, the Mission vest sheds water five times faster than uncoated neoprene.

### Features

- Elastic waist cord with boardshort attachment loop
- Zipperless
- Harness grip pad
- Flatlock seams

Thickness	Colour	Size	Code	SRP €*
2	C1 black	S/M/L/XL/XXL	143030/ MU C709	109,95

## NEW RISE NEO TOP APEX PLUS

Constructed from 2mm of the brandnew Apex-Plus neoprene with an inner lining of Bamboo Charcoal. NP double-lined neoprene garments provide warmth and flexibility, especially the Apex-Plus neoprene offers 25% more stretch than traditional neoprene.

### Features

- Elastic waist cord with boardshort attachment loop
- Zipperless
- Flatlock seams

# BOOTIES

## COMFORTABLE, WARM AND ERGONOMICALLY SHAPED

The NP booties are designed to fit perfectly, feel natural and give support in critical areas such as the ankle and toes.

### INNER MATERIAL

#### BAMBOO CHARCOAL INNER SOLE

Bamboo Charcoal is best known for its inherent antimicrobial and anti-odor properties, but few are aware of the Far Infrared Ray (FIR) reflecting ability of this unique material. The fabric reflects the body's FIRs back to the wearer, resulting in reduced fatigue, quicker warm-up time and improved regeneration. This natural fiber is woven into our bootie lining.

#### FIRELINE

Fireline is an exclusive, ultra-warm, feather- light and stretchy insulation layer. Consisting of brushed, quick-dry polypropylene lines knitted over jersey, it feels soft and warm to touch. The brushed surface absorbs moisture which is then heated by your body creating a warming greenhouse effect inside the suit.

#### HORIZONTAL VELCRO CINCHES

Allowing better security and fit adjustment. The strap is located in the upper-arch / ankle area to avoid interference with foot-straps.

#### HEEL-HOLD BOX

Giving support to the heel / ankle area and preventing the boot from rolling on the foot.

#### N-GRIP SOLE

Neoprene layer for comfort and N-Grip outer sole to give the natural bare-foot feel required for direct contact with the board.

#### LEASH BLOCKER

Prevents leash from getting trapped between toes.

#### TATEX SEAM TAPE

Prevents water from penetrating through seams.

#### EASY ENTRY VELCRO OPENING

For easy integration with wetsuit ankle closures.

#### GLUED AND BLINDSTITCHED (GBS) SEAMS

An efficient, watertight seam created through a triple gluing process in conjunction with a blind stitch that does not fully penetrate the rubber. The technique allows precise curved seams and facilitates a snug, anatomically correct fit.

### FEATURES

NEW

## ELITE FIRELINE LATEX SPLIT

As warm as a 5mm through Fireline insulation and 100% sealed exterior.

### Features

- Fireline thermo lining
- 100% waterproof latex dip technology
- Ultimate barefoot feel using ultra soft latex neoprene
- Textured rubber grip sole

# WINDSURFING

---

*waves after waves*

## MATERIALS TECHNOLOGY

NeilPryde sails are built tough, designed to withstand the most extreme riding conditions and the test of time. Extra muscle and twice the endurance are achieved with twin seams and ArmourWeb reinforced construction.

This, together with our Forceline Frame concept, provides the backbone of NeilPryde sail strength and unmatched durability.

So go as hard as you like and then some.

### Custom Internal Printing

Our custom printing technology allows us to print the films prior to lamination giving us the flexibility to use multi-coloured, custom graphics. The print is of minimal thickness, reducing weight and producing a higher definition of

colour. During lamination the printed side is placed on the inside of the film so there is no need to worry about wear. Your sails will forever remain looking bright and fresh.

### Twin Seams

Twice the muscle and twice the endurance. Double stitching is used on all critical seams on all sails allowing them to endure prolonged exposure to high loads and impacts.

### ArmourWeb

ArmourWeb is constructed from full polyester lines at +/-40 degrees, creating an interlaced, woven web for high tear resistance. Available on Fusion / Ryde / Hellcat / Hornet.

### ArmourWeb ULTRA

High-strength rip-stop grid made of high-tensacity ULTRA yarns at +/-40% degrees. This yarn has a similar breaking strength to Kevlar TM, but much better UV resistance. Available on Fly / Combat / Atlas / Wizard.

## Forceline

Forceline yarns are ultra-strong, strategically placed filaments that function like cables on a suspension bridge to absorb and disperse loads into the body of the sail. Forceline has allowed us to do away with unnecessary panels and seams, reducing overall construction complexity and weight.

We use Forceline differently in wave and freestyle sails compared to x-over and freeride sails to account for very particular loads experienced. The clew and tack areas of all wave and freestyle sails are now filled with two Forceline Panels and the central foot panel is removed entirely. As a result, weight is reduced; non-structural materials are removed and replaced with load bearing yarns that are perfectly aligned with loads coming from sail corners. Forceline Variable Density is used in the leech area to support localised loads and to strengthen and protect the sail, especially when it gets washed in the waves.

X-over, Freeride and racing sails have Forceline filaments built into the clew area to support the significant forces radiating from here.

Together, these reinforcements create a lightweight shield that can support extremely high forces experienced in these critical areas. Use of Forceline has resulted in stronger sails, less stretch in key areas and industry leading load absorption and dispersal patterns.

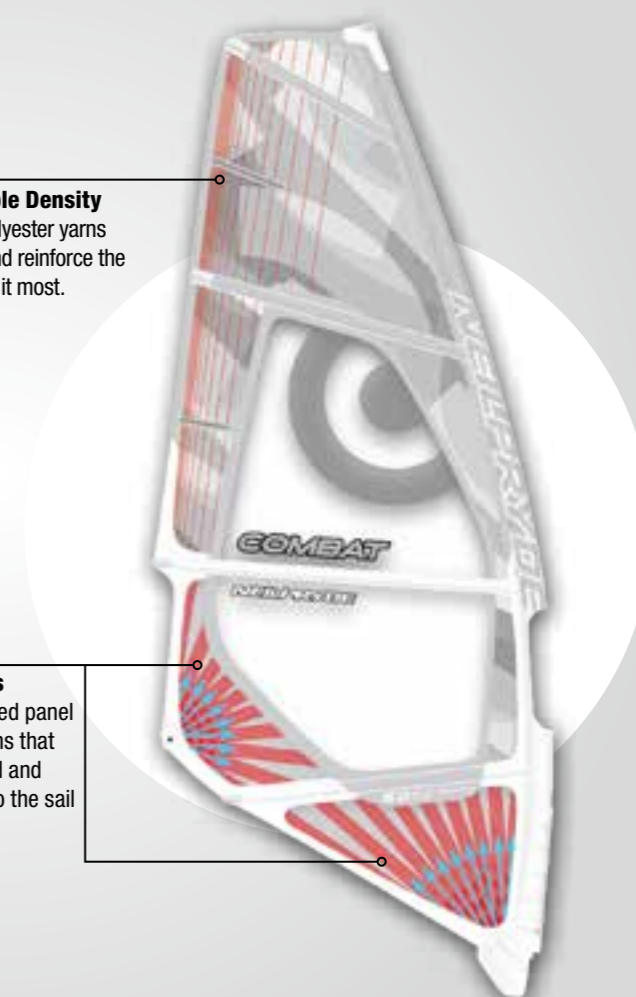

### Forceline Variable Density

Variable density polyester yarns that follow loads and reinforce the sail where it needs it most.

### Forceline Panels

Structural laminated panel with radiating yarns that seamlessly absorb and disperse loads into the sail body.

## THE FLY – DOWN THE LINE WAVE

The most neutral and ‘on-off’ wave sail, the Fly excels in pure, clean waves where the light, soft handling allows for an experience as close to surfing as possible. The 2015 Fly has evolved into a three-batten concept. It feels extremely light in the hands and is incredibly maneuverable, retaining a handling pedigree and control levels that keep you where the action is - in the critical wave sections you’ve been hunting down.

### INNOVATIONS

The new three-batten Fly features a cross batten construction that allows us to design a super light sail while keeping an extremely stable sail profile by pushing the draft low and forward. Forceline panel incorporates both clew and tack radial construction into one laminated panel. The proximity of the clew to the cross battens distributes the load very evenly and prevents the draft to move back as well as keeping the sail stable.

Size	Luff	Boom	Battens	Ideal Mast	Top Finish	Code	SRP in €*

\*New Shape

## COMBAT

The legendary Combat continues to stand out as the go-to choice in the collection for wave performance and all-Around versatility. The Combat combines high-end construction with handling that is improved year after year and signed off by the best wave sailors on the planet.

### INNOVATIONS

Luff curve adjustments allow for increased middle leech twist to release excessive power. A moderate and progressive luff curve for optimum maneuverability, speed and power in both onshore and side-shore conditions. Central Moderate Profile for optimum balance between upwind power and stability. A large tuning range to trim the sail for all conditions. All sizes up to 5.0 come with the 4 batten concept.

## ATLAS – FREEWAVE

Atlas offers predictable, steady and user friendly drive, ideal for use in multiple wind and wave conditions. Early to plane, the Atlas is up and ready to get into the action with efficient, usable power at all times. Featuring great upwind ability and acceleration, the Atlas pushes hard when conditions are less than ideal and its high lift characteristics ensure massive jumping performance.

Size*	Luff	Boom	Battens	Ideal Mast	Top Finish	Code	SRP in €*

6,2	454	187	5	430	Fixed Head	151103	719,00

## WIZARD – FREESTYLE

The Wizard is the ultimate new school freestyle sail. Delivering more direct drive and a high level of lift, this sail planes instantly and has silky smooth handling. Early planing, stability and balanced feel during tricks are the key requirements for a freestyle sail and the Wizard has it all. Plenty of air and more pop than ever.

### INNOVATIONS

We used a wider luff panel in order to allow the sail to power up and down to a larger degree and also more instantly. The leech is a little tighter which promotes power and there's more support from the battens in the upper body sections that stabilize the sail during maneuvers. Four battens up to 5.7 keep the sail weight to a minimum for optimum performance. Tetoron luff-panel combined with a narrow sleeve allow the sail to transition from neutral to maximum lift in the shortest time.

## RYDE

The Ryde has been designed for classic flat-water freeriding. It offers great low-end power and stability for early planing and controlled maneuvers. The Ryde is an ideal choice for new generation wide and thin Freemove boards as well as more conventional Freeride boards. Planing and gybing made easy - windsurfing pure and smooth.

### DESIGNER'S COMMENT

With a shorter boom and higher cut foot than the Hellcat, the Ryde perfectly combines Freemove and Freeride characteristics. Six battens and the Dynamic Compact Clew make it fast and controllable in straight lines with a wide wind- range that provides a truly fun freeriding experience. The Dynamic Compact Clew helps the twist to be progressive for optimum draft control and stability. The Medium Foot Cut for optimum balance between easy maneuvers and performance. A Hybrid Luff Curve creating good lift while maintaining a stable profile when overpowered.

## HELLCAT – NO-CAM FREERIDE

Born from the NeilPryde Racing Program, the Hellcat is a thoroughbred performance freeride sail. It's fast, powerful and delivers an exhilarating combination of speed and acceleration. Slippery and rapid when powered up on a reach, Hellcat's shaping and twist characteristics are derived from the EVO race sail ensuring pace and pedigree of this high-performance freeride machine. Fast sailing made easy. High top-end speed, great acceleration and just a full-on performance freeride sail. A true race feeling without cams.

### DESIGNER'S COMMENT

Directly derived from the racing and slalom program, Hellcat features the Open Integrated Compact Clew with Forceline load distribution.

## HORNET – TWIN-CAM FREERIDE

Hornet is the sail of choice for sailors looking for extremely early planing. Pure speed and thrills with accessible race-sail-like performance, in a package that is a breeze to rig and feels light in the hands. Inspired by the Racing Program, the profile ensures high stability levels in gusts or when overpowered. The result is cam-free handling in maneuvers combined with cam-sail straight-line performance and low-end power.

### INNOVATIONS

Now featuring seven battens and EVO-inspired clew construction, the 2015 Hornet really steps up in performance, especially in top-end speed and control. The super compact Integracam design allows us to combine power and stability of a camber- induced profile with the narrow sleeve size of a no-cam sail.

RS:SLALOM MK6 – FREERACE / SLALOM

The RS:Slalom MK6 is designed on the concept of real world racing. With long distance and GPS sailing trends continuing and the resurgence in slalom racing, the MK6 brings World Cup winning RS:Racing technology to a wide range of performance minded sailors. RS:Slalom MK6 takes the design pedigree of NeilPryde's RS:Racing sail and builds it into a high performance yet user-friendly slalom package. It features a combination of enhanced bottom end power, excellent top end speed, stability and exceptional rotation at every gybe.

SAILS

## MASTS

The NeilPryde mast range is based around three performance levels: X35, X65 and FX100. Higher performance level masts will have higher carbon content as well as use higher modulus carbon fibers. This will reduce the weight of the mast as well as significantly increase reflex speed resulting in higher performance. Every NeilPryde sail will perform to its highest potential when used with the specified NeilPryde mast.

### RDM OR SDM

The NeilPryde RDM masts are compatible in curve and flex with NeilPryde SDM masts. Choose an RDM mast for a softer, more forgiving feel and durability and an SDM mast for a faster response and more direct feel. We recommend the use of SDM masts on cambered sails.

### WHY NEILPRYDE MASTS?

Four reasons why it's better to use NeilPryde sails with NeilPryde masts:

1. You'll get maximum performance from your rig.
2. To ensure optimum fit.
3. Our sails are designed around our mast curves.
4. Particularly in cambered sails it is critical to use the right mast diameter for cams to have optimum function.

### MATRIX 35 SDM/RDM

With a 35% carbon content and filament winding construction the X35 offers affordable performance. During the filament winding process the mast yarns are laid on a mandrel at different angles between various layers. Each particular mast size will have specific angles and numbers of layers to ensure the perfect bend curve and

masts performance. The filament winding construction is highly durable due to loading distribution from end to end being even, leaving no stress points on the mast. With the bend curve optimised to work best with all NeilPryde sails, X35 offers great.

#### SDM

Length/cm	Stiffness	Weight/kg	Code	SRP in €*
400	19	2.31	122001	<b>239,00</b>
430	21	2.55	122001	<b>259,00</b>

400	19	2.31	122004	<b>289,00</b>
430	21	2.54	122004	<b>299,00</b>

### MATRIX 65 SDM/RDM

The X65 has 65% carbon content and filament winding construction. This mast is perfect if you are looking for durability with good response and a light feel. During the filament winding process the masts yarns are laid on a mandrel at different angles between various layers.

Each particular mast size will have specific angles and numbers of layers to ensure the perfect bend curve and masts performance. As with all NeilPryde masts, the X65 is designed to work in perfect synergy with NeilPryde sails.

#### SDM

430	21	2.30	122005	<b>389,00</b>

### FX100 SDM/RDM

If you are looking for performance with no compromises, FX100 is the clear choice. Thanks to this mast's prepreg, 100% Carbon construction (where the combination of carbon layers, fibre orientation and mandrel geometry control the bend curve and flex) this mast has a lightning fast response and a lightweight feel providing optimum performance. In the

final step of production carbon prepreg tape is continuously wrapped around the whole mast creating an outer protective layer and a very durable mast.

## X3 ALUMINIUM BOOM

The X3 140 and 160 booms come with a NeilPryde mast shim for use.

- 'Pressure Flow Forged' aluminum Head
- Monocoque aluminum tail extension
- T6 series alloy arms
- S-shape profile on 140 and 160 lengths
- Oversized mast cup in glass fibre reinforced injection moulding
- 'New School' profile available in the 140 & 160

NEW

## RADICAL QUAD

The all-new 2015 Radical Quad sets standards for an entirely new dimension of wave windsurfing. The new board concept features a double concave bottom with probably the deepest concaves (5,5 – 6mm deep) ever used on new age wave boards. The deepest part of the concaves has been moved right underneath the standing area which created a very long flat section under the straps. This makes the boards plane early and accelerate to high speed when sailed flat. The concaves also allow for a curvy bottom line in the rails with almost no flat section. This comes into play when the board is railed up where you will experience incredible turning and a new unknown riding sensation. The brand-new wingers provide the board with more surface area and early planing while with the thin, narrow tail allows you to make super radical turns. The centered volume distribution makes the boards float in a neutral position which helps to get over the white water easily. The Radical Quad is the ultimate weapon for Hardcore Wave Action.

## THRUSTER QUAD PRO

These fast and versatile wave boards offer a huge range of use from on or offshore conditions to side shore conditions they always deliver great performance and fun. You will love them for their ease of use in riding waves and the potential to rip hard when wanted. The ergonomic deck shape provides a comfortable stance and responsive rail changing. With great planing power they qualify as bump and jump high wind boards too. In the thruster setup they are perfect for conditions where you need a fast, early planing, powerful board that turns well and launches into the sky like a rocket. In the quad setup you get a board that is super loose and provides radical turning and heaps of control on the wave. So you can shift the focus from an onshore rocket to a side shore ripping machine. This suits our riders on the PWA tour as well as any wave rider wanting a versatile wave board.

## INNOVATIONS

The Thruster Quad comes with three slot boxes and two Mini Tuttle boxes, so you can choose between a Thruster or a Quad Set Up. The boards additionally come with Mini Tuttle plugs to cover the Thruster boxes when the side fins are not used.

## FREESTYLE WAVE – THE “ALL IN ONE” ORIGINALS

Since starting with the new board category “Freestyle-Wave” in 2001, many brands followed. If you want the original you don't need to look anywhere else. The Freestyle Waves are great all-rounders with an incredible wide range of use. They deliver a perfect balance of wave, seriously fast bump & jump and freestyle performance. The 77, 85, 93, 102 Pro Editions additionally handle any kind of wave conditions (from side-on to side-off) because of the Thruster setup. Easy to control in the air, but it's in manoeuvres where they really stand out. They carve superbly whether you crank them hard or carve them smooth. Short and compact with the center of gravity and the widest section close together, the board guarantees balance and stability, whether planing or not. Sufficient tail thickness creates a rounder constant dome at the deck and a very comfortable stance. The rail radius is thin and sharp to offer great grip in the turns.

## INNOVATIONS

The bottom is equipped with a constant Vee with double concaves running through. The flat bottom curve in the concaves delivers great early planing and speed while lots of bottom curve in the rail line provides good manoeuvrability. The double concaves under the mast base cushion the ride over chop. The 85, 93 and the all new 102 also come with double concaves in the nose for an even smoother ride especially when conditions get really rough.

NEW

## FREESTYLE – „THE RIGHT STUFF FOR RADICAL ACTION”

Thanks to the cooperation of Werner Gnigler, Steven Van Broeckhoven and Youp Schmit the performance advantages of the new Freestyle make it easier to pull off all the big moves and leave the window wide open to spice up your moves with extra style. The 106 remains unchanged whilst the 92 and 101 have been completely reshaped.

## INNOVATIONS

Both new boards gained some thickness and volume in the mid-section. Now, they float in a more neutral position, are more stable and much quicker to lift up onto the plane. Everything is focused at the turning point where the mast base sits making rotations a lot quicker and easier. This also helps for switch stance moves. The volume distribution also influenced the outline shape of the board. It delivers unmatched pop and maximum acceleration, which you need for those super high tricks. A sharp tuck line running from the tail close to the mast base is responsible for great grip and drive that creates maximum speed instantly. Towards the nose a super soft tuck line offers an easy transition from aerial manoeuvres into sliding tricks by stopping the rail from catching.

## ALLRIDE

The All Rides are sporty multipurpose boards between Freestyle Wave and Super Sport. They are easy planing, comfortable to ride and go really fast while delivering an exciting, electric feeling when going fast. Plug and play windsurfing - jump on and have fun. This year we redesigned the very popular 106, the size which covers it all and created an even more perfect all-rounder. The 96 and 116 remain unchanged. The All Rides are easy, accessible boards that offer high performance and good comfort in all conditions - from flat water to open seas and also for carving the open water swells.

## INNOVATIONS

A more parallel outline in the midsection of the board is used. This offers more planing surface around the mast base area and creates easier planing and more stability when non planing or during tacking. Once planing, the additional outline curve towards the tail lets the board fly over chop and improves the manoeuvrability. The double concave in the front and mid-section in combination with a soft tuck line provides more comfort than expected. The new 106II is just a bit better in everything and is great fun to ride.

## MAGIC RIDE

The Magic Ride completely hit the nail on the head last year. The new generation of these extra wide, short and thin Freeride Boards offer incredible early planing, top speed and the easiest gybing possible. The Magic Ride really gives you an electrifying feel which you normally only get from much smaller boards. Shaper Werner Gnigler took a lot of features from the Freestyle Wave boards. The thin rails in combination with the low overall thickness make them such outstanding easy gyber's. The wide body concept creates ease, comfort and stability. This in combination with the special rocker line probably makes the boards the ultimate in passive planing today. You don't need to pump or use a special technique to get them onto a plane. Just sheet in and go!

## INNOVATIONS

Due to the extreme popularity of the Magic Ride the additional size of 111 will complete the range. It will be available in the high-quality Gold Technology and in the cost-effective ES Technology.

## X-CITE RIDE PLUS

The name X-Cite Ride became a trademark for comfortable and sporty freeriding.

The new range still follows the basic concept. With the introduction of the new super easy Magic Ride boards we decided to slightly re-position the X-Cite Rides and to take them to the next level of sportiness. So the PLUS in the name stands for improved overall performance. The boards are made wider, with a bit more parallel outline in the midsection. This results in a bigger planing surface lifting the board up onto the plane quickly and effortlessly. It also improves the stability when tacking or non-planing. The tuned bottom curve allows the board to release easily creating the exciting feeling, stunning riding sensation and the increased sportiness.

## SUPER SPORT

The Super Sports are as fast as ever whilst being a lot easier to ride and handle than true Slalom boards. For advanced riders it's easy to get maximum performance out of them. You can stand totally relaxed and transfer all the sail power into the board to accelerate more and more. It's easy to stay in control when blasting back and forth as well as in the high speed carving gybes. The reduced overall length gives the boards a lively feel. The volume distribution is very balanced throughout the board which is an essential feature needed for early planing and effortless riding. Really fun and fast boards for sporty riders.

Model	Length (cm)	Width (cm)	Volume (Liter)	Weight +/- 6% (kg)	Fin Power Box	Code	SRP in €*

PRO 124	245	73	124	7,3	Super Sport 45 G10	251036	1.999,00
PRO 136	245	80	136	7,8	Super Sport 50 G10	251036	1.999,00

This brand new board combines the two concepts that we offered in the past. One shape covers it all, maximum light wind planing ability, easy handling and an electrifying sensation of speed. All the knowledge from the latest Super Sport, Slalom and Formula development went into the design. The dimensions 245cm x 91cm are perfect for great stability and a neutral water position. So you can get the board onto the plane without an active sailing style. The special volume distribution is also very important as it allows you to get planing with hardly any white caps in sight. For the best possible control, we used the new Winger Design, which makes the deck outline wider than the bottom outline. This allows the rider to have a more outboard stance producing lots of power, maximum control and comfort on long runs. The bottom shape features the most efficient concept where the 'V flow' increases constantly towards the tail to give the rider the sensation of flying over the water's surface. The true light wind free rider.

## FORMULA

We developed the Formula by merging the former Power and Speed. The added outline curve at the tail makes it easier to find the ideal water position of the board. Due to the outline it feels looser under your feet, so it is easy to keep it 'flying'. The wide tail creates plenty of power that is instantly converted into lift to enable upwind sailing. At the same time it's easy to release all that power and transfer it into maximum speed. We achieved this with a new progressive bottom V-flow that also takes pressure off your legs making it easy to handle all this lift, and consequently allows you to go faster and faster.

Model	Length (cm)	Width (cm)	Volume (Liter)	Weight +/- 6% (kg)	Fin	Code	SRP in €*
PRO 100	229,5	100,4	173	8,8		251042	2.349,00

## SPEED

They have rocket like acceleration, feel super loose on the water and reach unbelievable, almost unlimited top speed. Take the biggest sail you can possibly hold, sheet in and have lots of fun, and have faith in the knowledge that you will stay in control even at the highest of speeds. These boards have no limits and will go as fast as you dare to go. They are designed and developed for those who have the guts to put the pedal to the metal and go for it. The Speed Slalom offers the great combination of a light wind speed board and a full on slalom race board. It features a double concave front section with soft tuck rail for a smooth ride over chop. This makes the boards immune from getting pushed off course by side chop. Towards the tail the bottom transforms into a flat V, which increases slightly towards the tail. This produces minimum drag and gives the board that loose feel.

Model	Length (cm)	Width (cm)	Volume (Liter)	Weight +/- 6% (kg)	Fin Power Box	Code	SRP in €*
PRO 45	228	45	53	4,4	t.b.a.	251040	1.849,00

PRO 55	235	55	84	5,3	t.b.a.	251040	1.849,00

## SLALOM X

Four all-new sizes that are wider and thinner than the proven, unchanged boards in 66 and 80 have been developed for The Slalom X. The range of use in the new sizes, 60, 69, 78 and 82 has increased. The new 69 can handle sails up to 8.5m. The new 60 is easy to ride up to 7.5m. A lot more forgiving and comfortable to ride is the new 82 that controls sails up to 9.5m. The extra width around the mast base increases the planing surface and helps to jump on the plane instantly. The rather pulled-in outline towards the tail gives them a very loose feeling and helps to let them "fly". This outline loads up the fin instantly and lifts the board up for rapid acceleration. It also improves gybing because you can really carve it. The Slalom X has the ability to push your speed to a higher level.

EXPLORER | EXPLORAIR

The Explorer combines the stability a beginner needs with the sporty planing feel an advanced rider wants. Contrary to wide body beginner boards like the Funster's, the Explorer's feature rather narrow and long hulls. As soon as you master the basics of windsurfing they lift up to a glide in light winds instantly offering that 'Funboard feeling'. Once planing they feel fast, sporty and alive. They work great as beginner boards and shine with their enormous range of use, progressively unleashing their sporty potential the better you get! Play, learn, cruise, glide and have fun in all conditions. They cover it all - true all-round funboards.

FUNSTER | FUNSTAIR

The Funster combines the easy handling of a super stable beginner board with the performance of a large freeride board. Excellent beginner and family boards, also offering fun to the advanced rider. They have comfortable EVA decks and lots of different footstrap options. This allows you to slowly move from an easy cruising setup, to a sportier stance out on the rail of the board. They all come with indestructible, detachable fiberglass nose protectors. The 205 and 180 are simply perfect beginner boards. After only a few hours everybody will be sailing back and forth. The 145 and 160 have a wide range of use: From beginner boards for kids and lightweights to sporty cruisers for more advanced riders.

- + QUICK TURNING
- + STABLE ARC DESIGN
- + HUGE LOFTY JUMPS

#### C-SHAPE KITE ADVANTAGES

- + FAST TURNING
- + POWERFUL UNHOOKED
- + KITE LOOPING

### KITE TECH

#### Double Ripstop

Developed specifically for kitesurfing. Highly durable and low stretch in warp and weft. Excellent recovery on the bias. All Cabrinha kites are 100% 2DR Double Ripstop.

#### SPRINT Airlock Valve

Single point rapid inflation of the kite. The large one-way airlock valve quickly feeds air into all of the struts from a single location. It connects directly to the hose eliminating the need for an adapter. Once inflated you can lock off each strut independently.

#### Modern Craftsmanship

Kites are carefully constructed by hand using the most cutting edge technologies and materials available today. The secret to our ultra durable construction lies in the experience gained building the world's best kites for over a decade.

#### Dynamic Arc

A dynamic arc allows the kite to have two distinct arc shapes. Tighter arc in flight for faster turning. Opens wide on the water for faster relaunch.

#### Power Control Pigtails

Quickly adjust the power level of the kite. Each rear line "pig tail" connector has three power positions which you can connect to. The middle position is the factory recommended position. Create more power by connecting the knot closest to the kite or less power by connecting to the knot closest to the rider.

#### Skeletal Frame

All Cabrinha kites are designed and built on a skeletal frame foundation. Skeletal frame technology allows us to make a lighter more durable kite by strategically placing the reinforcement weight materials into a framework that surrounds the lighter weight canopy materials.

\*VAT netherlands and belgium: 21% All prices in Euro. Subject to modifications. Attention is drawn to the general payment and delivery conditions.

### SWITCHBLADE – PERFORMANCE FREERIDE/CROSSOVER

After ten years of refinement, the Switchblade kite from Cabrinha is held as the benchmark for which all crossover/freeride kites must aspire to. Its success lies in its uncommon blend of high performance and ease of use. The Switchblade will easily crossover from freeriding to freestyle to surf on any given day. The common element in each of these riding styles is precise handling; and this is where the Switchblade shines. The Switchblade provides maximum control with a light bar touch. The SB's high performance profiles deliver the power needed in light winds and the ability to dump the power in strong winds. This gives the SB the type of range needed to extend your sessions when the winds are up and down. The five strut design holds the canopy true to its shape regardless of the wind condition or angle of attack.

#### Rider Profile

The discerning rider who will crossover from freeriding to freestyle to surf on any given day. High performance, versatility, and build quality are at the top of their list.

### RADAR – VERSATILE FREERIDE / CROSSOVER

The all new Radar kite intelligently combines raw performance with absolute simplicity. The Radar is a performance three strut kite with a park and ride power source. Any input given to the control system translates into an immediate response from the kite. The Radar is a full bodied, swept wing kite, meaning that you will not find an easier kite to relaunch when the kite hits the water. The generously curved leading edge makes the kite roll into the relaunch position with very little input from the rider. The Radar excels as a crossover kite with legit skills in freeriding, freestyle, and surfing.

#### Rider Profile

Riders who want a simple to use, crossover performance kite with incredible relaunch capabilities.

CONTRA – PERFORMANCE LIGHTWIND

The Contra performance light wind kite is specially designed to maximize the kite's power production in light winds. The Contra is designed to be a light wind extension to any kite in our range. The Contra delivers distinctly sharp and precise turning that makes generating power and speed a snap, while maintaining the agility of a smaller kite. It's this type of performance that has widened the scope of what is possible in light winds. Whether you are riding freestyle, wakestyle, surf or just burning around, the Contra has the muscle to get you up and riding when the winds are barely showing signs on the water.

**Rider Profile**  
For riders looking to extend their game into the light wind arena.

DRIFTER – SURFING

The Drifter surf kite is a kite with a purpose. This kite is dead set on being there for you when you need it and getting out of the way when you don't. You see, kite surfing is an act of taking power from the kite when you need it and dumping the power altogether when you don't. This high depower kite allows the rider to drop in, accelerate, then dump the power completely to snap or carve their turns. It delivers a perfect blend of the best elements of surfing and kitesurfing. The Drifter's special design allows it to drift downwind and stay aloft even when the lines are slackened. This phenomenon, first developed by Cabrinha is known as drift stability.

**Rider Profile**  
Specially designed to be the absolute best kite for surfing and surf freestyle.

CHAOS – FREESTYLE/WAKESTYLE

The Chaos freestyle kite is a highly technical freestyle / wakestyle kite capable of winning world class freestyle competitions. Everything put into this design is aimed at performing at the highest level of freestyle. This high aspect C shape is exactly what is needed for bursts of speed and the ability to slacken when unhooked. With the Chaos, you can throw a kite loop with the tightest arc possible, and the kite will hit the zenith with plenty of time to cushion your landing.

**Rider Profile**

VELOCITY – FREERIDE/RACE

The Velocity is our most efficient performance freeride/ race kite. The Velocity's ultra high performance comes from a combination of its high aspect outline, flatter arc, and high performance profiles. This delivers the most power per square meter of any kite in our range. It is perfect for boosting huge jumps or racing around a course.

**Rider Profile**  
Designed for riders who want the ultimate power source for racing or high end freeriding.

GENESIS KITE – LEARNING / SIZE 2.0

The Genesis kite is a scaled down no strut inflatable kite designed to teach a student how to operate a fully functioning 4 line kite. The Genesis kite allows a rider to learn real world techniques of water launching an inflatable kite by pulling on the left or right leader lines. It will also teach a rider the important technique of operating a 1X security system. Since the Genesis is designed to be used with a standard Overdrive control system, the student will be familiar with all the control and security features by the time they get on the water for their first lesson.

2,0	55	351087	279,00

## QUICKLOOP

### QUICK & EASY RESET

**"FASTEST RELOAD ON THE MARKET!"**

QuickLoop's™ defining feature is its ridiculously simple operation of our 1X security system. Upon activation of 1X's single line flagging system the kite's power is immediately killed and it will rest motionless on the water or land. The incredibly easy reconnection of the QuickLoop™ harness loop is now the new benchmark in the industry for simplicity.

To reconnect, simply push the open end of the loop into place and the latch will automatically engage the loop.

Dropping the QR body back down secures the loop back into place.

## OVERDRIVE 1X

CONTROL & SECURITY SYSTEM WITH QUICKLOOP

### Overdrive

The bar ends can change the length of your bar from its standard mode of 49cm, to the Overdrive mode of 57 cm in seconds. The Overdrive mode will increase the turning speed and performance of any kite large or small.

### 1X Multi bore tubing protection system

The 1X is not a depower system, it is a full blown shut down system. The 1X relies on only one line to immediately shut down the power of the kite whether it be on land or water in all wind conditions.

### Recoil

Recoil keeps your trim adjusters in the same position every time. Even after you've depowered your kite, Recoil will return the trim adjusters to the exact same position for easy operation. The spring has been extended and is now closer to the rider on all bars.

### Internalized Lines

The protective PU tube allows us to run the depower mainline and the 1X landing line through the center of the bar without the risk of abrasion or tangling.

### Low V

We have lowered the front line connection to the CAS in order to provide a more direct and immediate response from your bar input.

**New ergonomic floating bar ends**  
We have increased the length of the bar ends to provide protection from line wrapping, and to help in floatation.

**NEW**

## OVERDRIVE 1X CONTROL & SECURITY SYSTEM

The 2015 Overdrive 1X QuickLoop™ control system is a fully adjustable control bar featuring our all new QuickLoop™ opening harness loop. QuickLoop™ is an opening harness loop connection designed to work specifically with our 1X single line flagging security system. QuickLoop's™ defining feature is its ridiculously simple operation of our 1X security system. Upon activation of 1X's single line flagging system the power of a kite is immediately killed and it will rest motionless on the water or land. The incredibly easy reconnection of the QuickLoop™ harness loop is now the new benchmark in the industry for simplicity. The all new Overdrive 1X security system now has a cleaner method to manage the 1X security line. We have removed the external 8meters of security line to create a simplified lower V connection. The 1X line stopper is integrated into the centerline adjustment strap.

### Features:

- Incredibly simple activation and resetting of the QR
- Overdrive™ bar ends adjust a full 8cm in length
- Recoil trim adjustment
- Soft EVA ends float entire bar
- Low V
- Internalized Lines
- Depower on demand

H1

The H1 is a one strap asymmetrical body shape which provides a positive fit for the rider looking for board control with ease of use. The H1 is supportive yet lightweight and flexible. The H1 can be used for all types of twin tip riding from freestyle to freeriding. The H1 attaches to the board with minimal effort and allows for multiple stance options with duck and heel toe offset option. It sits on a super cushy footpad with arch support, toe grips, and generous heel coverage.

Features:

- Single adjusting velcro strap
- New pad shape for a smooth comfortable ride while providing lots of grip
- Triple position duck adjustment for personalized stance
- Available in both small and standard sizes
- Industry standard 6" Mounting Pattern

Size	Code	SRP in €*
Standard	352205	120,00
Small	352204	120,00

H2

The H2 steps up the connection equation with a two strap, wide body backless binding. The H2's wider base and fuller coverage cradles the foot for more control and precision to create as much edge pressure as you need when busting huge freestyle tricks. The H2's tunable, ultra soft footbed create a perfect landing pad to keep your heels intact when dropping from the sky.

Features:

- New floating tongue to accommodate a larger range of sizes.
- Two quick adjusting velcro straps provide full coverage for a locked in connection with positive edge engagement.
- Triple density pad designed for a smooth comfortable ride, while providing grip, and impact resistance.
- Customizable heel pad inserts to tune your ride to hard and responsive, or soft and comfortable.
- Triple position duck adjustments for a personalized stance.
- Industry standard 6" mounting pattern.
- M6x16 stainless steel mounting hardware included
- Cabrinha multi tool

NEW

H3

Designed for kites with easy velcro entry & exit. Ultra-lightweight outer shell, and a lower profile upper section designed for more lateral movement without sacrificing support. Other features include Neoprene flex zones for flexibility, closed toe design to reduce cramping and improve fit and lightweight nylon baseless chassis to give you a solid board feel with maximum impact absorpsion.

Features:

- Lightweight outer shell
- Low cut closed toe design
- Three quick adjusting velcro straps for one handed entry /exit
- Supportive PU upper
- Neoprene flex zone
- Nylon chassis
- Lycra lined dual density EVA
- M6x16 stainless steel mounting hardware included

XCALIBER SIGNATURE Freestyle

The XCaliber is our competition freestyle pro model. Designed together with PKRA star, Alby Rondina, the XCaliber is designed to provide quick bursts of speed, incredible pop, and the upwind ability to keep your performance right in the box. The pop comes from our wood core and full carbon laminate. The extensive use of carbon allows this board to be our lightest, most technical twin tip.

Rider Profile

A premium competition freestyle board designed for the high end competitor.

Features:

- Designed with PKRA star Alby Rondina
- High reflex double bias carbon construction
- Explosive pop
- Excellent upwind drive
- Stable high speed landings
- 40mm GFN Hex flow fins

SIZE (cm)	BOARD / FINS	SRP in €*
132x40	352100	879,00
135X41	352100	879,00
138X42	352100	879,00
141X43	352100	879,00

ACE Freestyle/Freeride

The Ace twin tip takes the freestyle game out of the confines of the box. This go-to board performs in a huge range of freestyle conditions. It's forgiving in choppy water offering a smooth ride while retaining a high level of freestyle performance. The Ace is perfect for ocean or lake freestyle riding, thanks to its quad concave to quad V bottom shape. It is fast, smooth, and responsive.

Rider Profile

For freestyle riders who ride in any type of wind and water condition and experiment with alternate riding categories.

Features:

- Light weight basalt fiber construction
- Parabolic rails™
- Flex patterns tuned for a smooth ride
- Explosive pop
- Early planing lift
- Maximum upwind drive
- 40mm GFN hex flow fins

SIZE (cm)	BOARD / FINS	SRP in €*
133x39	352101	629,00
135X40	352101	629,00
137X41	352101	629,00
139X42	352101	629,00

CUSTOM Freestyle/Wakestyle

If your brand of riding leans toward throwing wakestyle tricks on the flats, the Custom would do you right. The Custom is a refined ride from many years of development in the wakestyle arena. The result is a board with pure wakestyle performance and surprisingly great upwind ability. All together this produces an incredibly smooth ride even in tight chop. The Custom is built with our winning combo of a Parabolic Rail™ and basalt laminate construction. The Parabolic Rail™ provides a stiffer center section while delivering a more responsive tip and tail flex and keeping the board weight to a minimum.

Rider Profile

For the riders looking for the ultimate wakestyle ride that also excells in choppy conditions.

Features:

- Turns choppy water into your personal skate park
- Excellent power control
- Easy landings
- Huge pop
- Works well with straps or boots
- Moderate rocker line
- Firm flex
- Outline hipped/ pulled in curve for power control
- Double concave with center V and raised fin panels
- 4x 30mm Hex flow GFN Fins

SIZE (cm)	BOARD / FINS	SRP in €*
133x40	352102	629,00
136X41	352102	629,00
139X42	352102	629,00
142X43	352102	629,00

CBL Wakestyle / Cable

In the increasing cross pollination of the Kite and Cable world the CBL stands out as the go-to model for both. The CBL can be ridden at the park or under a kite with identical results. The CBL features a deep double concave with a flat center and rail channels. The flat center combined with the P-Tex base is perfect when hitting any type of water feature. The rail channels provide the bite and the flat top 20mm GFN hex flow fins keep things grippy when needed and don't need to be removed at the park for added convenience.

Rider Profile

For riders who are dedicated to wakestyle, cable park riding or both.

Features:

- Wakestyle / Cable crossover
  - Smooth and durable P-Tex base
  - Smooth ride
- Obstacle friendly
  - Excellent grip
  - Slider compatible 20mm GFN hex flow fins

SIZE (cm)	BOARD / FINS	SRP in €*
136x42	352103	659,00
140X42,5	352103	659,00
144X43	352103	659,00

XO SIGNATURE MODEL Woman's Freestyle / Freeride

The XO Susi Mai signature model is inspired by the one and only Susi Mai. As a leader in performance riding and a role model for many, it was an easy task to create a board suited to her needs and the needs of the growing population of women in kiteboarding. Our approach to developing the XO was to start from scratch and engineer this board from the ground up. The result is a performance freestyle model with a soft, responsive flex. Details like appropriate sizes and widths, narrower stance options, and lighter weights all make this board the ideal choice for women of all levels.

Complete with H1 Siren bindings

Rider Profile

For women who want to progress their freestyle and freeriding.

Features:

- Light weight basalt laminate construction
  - Women specific flex pattern
  - Smooth ride in a variety of conditions
  - Early planing
  - Great pop
- Easy landings
  - Comfortable stance options
  - GFN 40mm hex flow fins

SIZE (cm)	BOARD COMPLETE WITH H1	SRP in €*

133X40	352105	699,00
136X41	352105	699,00

TRONIC Freestyle/Freeride/Big Air/Wave

The Tronic is back this season as our freeride/freestyle twin that loves to get huge air. This year it gets an upgrade in design and construction, implementing our Parabolic Rail™ shape and a basalt laminate construction. With a softer curved tip and tail and a rounded and tucked rail, the Tronic tames choppy water and can redirect itself on a dime. The bottom contour is a quad concave to deep V to cut through any chop. The Parabolic Rail provides a stiffer center section while delivering a more responsive tip and tail flex.

Rider Profile

For riders who like to get huge air and carve turns in the surf.

Features:

- Light weight basalt fiber construction
  - Rounded tucked rail shape
  - Parabolic Rails™
  - Chop killer
  - Smooth ride in a variety of conditions
- Powerful carves
  - Max edge control for boosting
  - 50mm GFN hex flow fins

141X42	352106	579,00
145X43	352106	579,00

SPECTRUM Freeride

The Spectrum is a freestyle freeride model which means that it has a wide range of performance in a wide range of conditions. We use Paulownia wood core for strength and rebound and durable ultra bond PU rails. The Spectrum is a progression model which means that it has the ability to keep up with your riding level as you progress.

Complete with Hydra foot straps.

Rider Profile

For the rider who wants a versatile performance twin tip.

Features:

- Shaped for a solid ride in variable conditions
  - Design that will keep up with your riding level
  - Great upwind tracking
- Easy landing
  - Durable textured top and bottom sheet
  - High visibility 45mm GFN fins

148X44	352107	529,00

STYLUS Lightwind Freeride/Racing

The Stylus is made to perform in the fickle conditions known as threshold winds. Threshold winds are generally thermal breezes with wind speeds just strong enough to fly a kite. The flat rocker line and extra wide outline make the most of these less than ideal wind conditions. In many cases, the Stylus twin tip will be the difference between sitting on the beach or getting a full kiteboarding session.

Rider Profile

The Stylus is specially designed for the rider who wants to ride a twin tip in the lightest wind possible.

Features:

- Excellent performance in light wind
  - Extra wide outline for early planing
  - Wide range of use
- Excellent upwind ability
  - 30mm GFN Hex flow finen

SIZE (cm)	BOARD / FINS	SRP in €*
145x45	352108	629,00
155X47	352108	629,00
165X48	352108	629,00

ALIAS Lightwind Freeride

The Alias is a super efficient light wind board with no limit to its performance or usage. The Alias, when combined with our Contra light wind kite, can have you flying across the water in well under 10 knots. The hybrid design is a combination of a race board and freeride directional; you get the best of both worlds in one board. The Alias, with its three fins will get you upwind in seconds. Once pointed off the wind, the Alias becomes one of the best downwind models for speed and maneuverability.

It comes with a swept bi-elliptical tri-fin set.

Rider Profile

A high volume directional board for light wind cruising, downwinders, or all round freeriding.

Features:

- Increases the bottom end wind range of any kite quiver
- Excellent light wind performance
- Excellent for distance and downwinders
- Internal grab handle
- Ultralight adjustable footstraps
- New 3 GFN fin configuration

SIZE (cm)	BOARD COMPLETE	SRP in €*
174x59	352109	1.199,00

Designed by Pete Cabrinha

This season we offer an all new range of surfboards to cover a much wider range of conditions. The most important changes have been made in the areas of width, volume, and construction. Wider widths and higher volumes have been implemented in the area most needed. Each board in the range is very different from the other which presents a completely different surfing or freestyle experience with each model.

General Rules

- Length:**  
Length is the first place to start when choosing a board. A general rule for choosing a kite board is to ride a board which is approximately 2-3 inches smaller than your height.
- Width:**  
Width of a board helps determine the volume as well as how much curve the board's outline will have. Wider boards generally have more curve (as well as more volume). Wider boards are lively under your feet, especially in lighter winds or smaller waves.
- Volume:**  
Volume is an important factor when choosing a board. Volume is made up of a combination of length, width, and the board's thickness. Volume is an important element, especially in lighter winds and smaller waves. However, when the wind is strong and the waves are bigger, too much volume will work against you.

**Bamboo + Cork Construction**  
All 2015 surfboards are constructed with our ultra durable Basalt + Cork sandwich layup. The basalt sandwich construction features a super light EPS core and bamboo reinforcement layer on both the top and bottom of the board.

**Pod Pads**  
Strategically placed hex shaped pods of EVA cover only the most crucial section of the board to allow easy repositioning of your feet. The hex pads are hollow to reduce weight.

**Fins**  
This season we bring you an all new fin design in two constructions

**Hex Core RTM fins Premium**  
Made with a hex core and glass, this fin has a stiffer base and a moderately soft tip. The hex core fin provides excellent drive.

**GFN FINS Standard**  
Our Glass filled nylon (GFN) fins offer a more affordable yet durable fin option. They have a slightly softer flex throughout the entire fin which translates into a dampened ride, especially in choppy waters.

ULTRALIGHT – ADJUSTABLE STRAP

The Ultralight adjustable strap is a minimal coverage strap which is perfect for surfing. The velcro adjustment makes it incredibly easy to get the right fit in seconds.

Model	Code	SRP in €*
ULTRALIGHT STRAP	352207	55,00

NEW PHENOM

Keahi de Aboitiz Signature Model

The Phenom takes a step towards the performance end of the surf chain while keeping its easy to ride characteristics. The Phenom is our widest board with the highest volume. The combination of width and volume makes this board extremely versatile in the surf as well as the flat water freestyle arena. The Phenom is developed with our two time KSP World Champion, Keahi De Aboitiz. Its 5 fin box configuration allows the rider to choose just about any fin set-up they like.

Rider Profile

Ideal for riders who are looking for a high performance surfboard with volume and trick riding capability.

Features:

- Works well in any wave size
- Customizable 5 fin box
- Perfect amount of volume and width for light wind
- More surface area for freestyle tricks
- Custom cut hex pod pads

SIZE (inch)	Code	SRP in €*
5'8" x 19.4" x 2.5"	352110	799,00
5'11" x 20.1" x 2.5"	352110	799,00

NEW PROTO

Reo Stevens Signature Model

The Proto Reo Stevens pro model is our advanced surfboard model. The shape lends itself to stronger winds and side shore surf conditions. The Proto is capable of surfing larger waves than the Phenom or Secret Weapon. This 3 fin model is ideal for down the line, side shore surfing. Its narrower outline and straighter rail shape is perfect for pushing turns at higher speeds. Yet, the generous use of rocker makes the board loose and snappy off the top.

Rider Profile

Excels in side shore, down the line surf.

Features:

- Smooth and drivey bottom turns with just the right amount of release
- Single to double concave bottom
- Wider nose offers lift under your front foot
- for freestyle tricks
- Thruster fin set up
- Custom cut hex pod pads

SIZE (inch)	Code	SRP in €*
5'7" x 18.9" x 2.1"	352111	799,00
5'10" x 19.2" x 2.2"	352111	799,00

NEW SECRET WEAPON

The secret weapon is a modern spin on a retro-surf design. The rounded nose and wide tail make this board extremely friendly to ride in real world conditions. It is fast and lively on waves of any size. The aggressive swallow tail and quad fin configuration gives this board its edge and attitude. The Secret Weapon is excellent at making the most out of sub-par wind and surf conditions. Even when the surf is flat, the Secret Weapon becomes the ideal board to throw down your freestyle game.

Rider Profile

Ideal for riders who surf in various conditions and also need a board for flat water freestyle tricks.

Features:

- Excellent surf / freestyle design
- Single to double concave bottom
- Wide bottom surface area for early planing and lively feel in surf
- Quad fin drive
- Custom cut hex pod pads

SIZE (inch)	Code	SRP in €*

5'10" x 20.8" x 2.3"	352112	799,00

# SUP

---

*No compromise!*

SURF

Based on radical surfboard designs but adjusted for the needs of SUP. Each board has a specific bottom shape suited to the size. They have a narrower nose section, high entry and extra rocker for a surfboard feeling. The pulled-in pointy nose section does not limit you in radical bottom turns and combined with the fast scoop rocker develops heaps of drive. Thin smooth rails slice effortlessly through the water and provide amazing grip. This combined with the tail kick gives the boards an incredible loose ride. Our unique fin angle concept is unmatched when it comes to speed necessary for either catching waves or busting aerials.

**What's new!**  
New reworked 2015 sizes available - 8'6" in PRO and Wood Edition  
New 2015 board: 8'10" AST. All PRO boards come with a Set of new Resin Transfer Molded fins.

**Target group:** For advanced and pro SUPer's.  
**Suitability:** For big waves.

The whole range comes with a FCS nose plug for a GoPro camera.

SURF WIDE BODY

We would all love to ride those 8'0"x26", 90 litres boards as they turn incredibly radically - but what about paddling out and standing on 90 litres? We realized that most of us simply couldn't handle those really small, tippy boards and came up with the Surf Wide Body concept. They turn really tight but are also very stable. Any slightly advanced wave SUPer can handle them and will love them! Short, compact and very stable. They offer immediate success in the waves. The quad set-up supports the radical performance. Made for small waves and beach breaks, from intermediates to experts. The PRO layup of our SURF and SURF WIDE BODY boards has no carbon, as we believe that carbon makes the boards too stiff for the surf. We have kept a natural flex pattern with strategic dual density sandwich layup and optimizing of the fibre direction. Importantly, our PRO boards are the lightest boards on the market that come with a deck pad.

**What's new!**  
New 2015 size available – the supersized 9'3" in PRO and Wood Edition and 8'8" in AST.  
**Target group:** For advanced and pro SUPer's.  
**Suitability:** For small waves and beach breaks.

The whole range comes with a FCS nose plug for a GoPro camera.

FUSION

Relatively short and wide. The step deck provides lots of volume in the board but still keeps the nice thin rails. The 9'8" and 10'2" shapes feature a single concave throughout running into a V towards the tail. The 10'8" has a slight single concave in the centre of the board, which runs into an increasing V towards the tail. The nose shapes create efficient lift while the thin rails produce good bite in turns. Quite a bit of nose rocker makes them feel at home in the waves. The pointy nose gives them a modern surfboard look. The extra V in the tail helps to rail these wide boards up when going down a wave.

Compared to most other all-round boards as well as to the JP Allround's they are more wave oriented and therefore have slightly less directional stability. Boards for everybody, from flat-water beginners to wave experts.

**What's new!**  
New 2015 size available – the 8'5" in PRO, Wood Edition and AST.

**Target group:** For flat-water beginners up to wave experts.  
**Suitability:** For flat-water and small to medium waves.

## ALLROUND

Long board-style all-round SUPs with great directional stability and range of use. They are probably the fastest all-round boards on the market. Super easy to ride and turn. They are great fun in all conditions. The concave nose, based on long board designs, creates more lift when touching the water and avoids nose-diving. They have very round rails and tuck, like surfboards. The narrow tail, in combination with increased V, makes them very loose and responsive. When standing in the middle of the board, the relatively flat deck curve makes it easy to keep your balance. The Allrounds' range of use is simply amazing. They work great for SUP beginners, flat-water cruisers, first time wave SUPers and for wave experts.

**What's new!**

In 2015 the new 10'6" in Wood Edition and AST complete the range as a performance oriented longboard-style paddleboard. We introduced the step deck concept in this model as well to maximize the stability and performance.

**Target group:** For SUP beginners and flat-water paddlers as well as wave SUP beginners and wave experts.

**Suitability:** For flat water and small and medium waves.

## WIDE BODY

The basic concept is similar to the Allround boards, but with some additional width. The extra width provides great stability in rougher conditions and through the white water, which make them ideal beginner boards for flat-water and waves. Perfect for a social paddle with family and friends on lakes or for an exciting session on the ocean. These boards are for every member of the family. Take your kids, your partner or even your dog for a cruise on flat-water, or find some waves and go for your first rides.

All four boards are also great beginner and cruiser windsurf boards.

**Target group:** Perfect family board.

**Suitability:** For lakes and open water and as windsurf cruiser boards for beginners.

NEW

## HYBRID WOOD

**What's new!**

Trying to combine the impossible is never easy. Making a board that will have a good glide, stability and be a solid surf board was no walk in the park. The subtle displacement bow flowing into a double concave bottom with soft thin rails and narrow tail was a winning combination. This creates a long efficient water line offering a superior paddling sensation on flat water with the longboard type of tail for easy rail to rail transfers in the surf. Take the Hybrid for a tour or a downwind run and check out the waves on your way back. Bring along your necessities under the bungee tie downs for a great day on the water.

**Target group:** The perfect board for tour and surf.

**Suitability:** The Hybrids come in a beautiful green Wood Edition with glossy metallic rails.

## VENUS

For 2015 we have involved a great group of ladies to create a specific women's SUP line. The 8'10" is dedicated surf SUP shape for advanced SUP surfer girls who will enjoy the vertical turns and surfboard style ripping.

The 9'8" is a surfy-all-round shape that performs equally well in the surf as well as in the directional paddling from lightweight beginners to performance surfers.

**What's new!**

The 10'6" is a classic longboard style board that offers great directional performance as well as the cool and easy first steps in the world of SUP surfing. The 10'0" with the generous 179 liters and 33,5" width is a great beginner board for all SUP styles out there and especially for the SUP yoga as it offers a great platform for even the most demanding poses.

**Target group:** For all ladies who are SUP beginners and flat-water paddlers as well as wave SUP beginners and wave experts.

**Suitability:** Cruising, fitness paddling, SUP surfing, SUP yoga, SUP stretching.

## SPORTSTER FLAT WATER

User-friendly race boards for high speed paddling. They work great in anything from really flat water to slightly choppy conditions. Feel at home on lakes, rivers and the ocean and are great for a core work out and fitness paddling. For most amateur racers they will be faster than full-on race boards as they are more stable and easier to handle. They come with a low displacement piercing nose that cuts through the water like a knife. The thin hull ensures a low standing position, which allows you to transfer all your paddling power into forward momentum. The rounded rails are forgiving, and do not get affected by sideways chop or wind.

### What's new!

The 11'4"x29" for the lighter riders.

**Target group:** For advanced riders who like to ride fast.

**Suitability:** Flat-water up to choppy water, lakes, rivers and open water, for workouts and fitness paddling.

## SPORTSTER OPEN OCEAN & TOURING

When we developed the new Sportster Open Ocean we figured that this board concept is fantastic for the coastal environment and we needed to come up with a user-friendlier version by just adding width. Paddling in the open ocean is very popular these days not to mention the concept of coastal down winders. The primary goal of the Sportster Open Ocean is to be able to take advantage of the ocean swells. It must be easy to catch swell while maintaining speed to stay on it, navigating them for as long as possible and connect easily to the next swell. They have a lot more overall curve compared to their flat-water siblings.

### What's new!

The 12'0"x32" Touring for the bigger riders or relaxed cruises.

**Target group:** For advanced riders who often ride in open water.

**Suitability:** Downwind paddle trips and swell.

Size	Technology	Length	Width	Volume	Weight	Fin US Box	Code	SRP €*

## RACE FLAT WATER

### What's new!

The 14'0"x24.5" and the 12'6"x25" are even faster! New grab handles instead of built in handles with optional side handles for beach starts.

We developed two new "late additions" to the 2014 race board range - the 12'6"x28" and 14'0"x27" which remain unchanged for 2015. Due to the unique bottom and rocker shape these racing machines can easily handle any rough conditions. The distinguished narrow outline and the proven sharp piercing nose creates a smooth water flow along the entire board length as the sharp piercing nose cuts the water's surface and displaces it at the same time.

The unique cross section shape has a round center part with flat sections towards the rail which are almost pronounced like bevels and a new volume distribution to guarantee the perfect water position. Some volume was taken out of the nose section to make the board less sensitive to side winds but we continued with the proven feature of the domed deck which is effective in all conditions, allowing water to flow off the board immediately without the use of drain pipes. The perfect tools for winners.

**Target group:** For advanced riders who participate in competitions.

**Suitability:** Flat-water racing.

## RACE OPEN OCEAN

### What's new!

Work great for races in rough waters, or where you go in and out the surf as well as for down winders.

They take advantage of the open ocean swells. You can easily catch a swell and maintain your speed for long rides. The displacement bow has been rounded off to create instant lift - if the nose does get submerged.

New features on 2015 models will be the grab handles instead of the built in handles for even lower weight as the built in handles carry unnecessary 200 grams of water around with you.

**Target group:** For advanced riders who participate in competitions.

**Suitability:** For all competition formats.

Size	Technology	Length	Width	Volume	Weight	Fin US Box	Code	SRP €*

## WINDSURF SUP

The Windsurf SUP was developed to work equally well for both sports and offers an incredible range of fun. It will get you on the water at any time - for fun, adventure or for a workout. An ideal family toy! A great SUP and Windsurf beginner board as well as fun board for the advanced SUP'er and Windsurfer. It comes with a fully retractable dagger board, which provides stability and makes it effortless to sail upwind.

**Target group:** Great board for windsurfing and SUP beginners as well as family board.

**Suitability:** Flat water, wave, and windsurfing.

## SURFAIR

Great fun in the waves without the risk of injuries. Some of the pro guys were amazed at how well this board handles the surf. Probably the lightest inflatable on the market today at only 7.5 kg / 16,5 lbs. Because of its small size when rolled up its an ideal addition to the board quiver of everybody. The board is made with the most advanced Drop Stitch Technology, providing greatest possible durability and stiffness. Next to the leash D-ring at the tail, another towing D-ring is attached on the bottom of the nose. Delivered as a complete package with backpack and air pump.

**Target group:** For beginners up to wave experts.

**Suitability:** Wave.

## ALLROUNDAIR

Stable all-round boards that work in all conditions from flat water to small surf, for every rider from beginner to expert. Experts can also take them to easy white water rivers.

The 9'8"x31"x4" is a short and wide wave orientated allround board perfect for lightweight flat-water beginners, wave experts, as well as for light and advanced white water SUPer.

The 10'2"x32"x4" is perfect for all riders in all conditions from flat water up to small waves. For advanced riders its perfect for white water down the rivers.

The 6" version of the 10'2 offers additional volume and rigidity. With the added rigidity along comes the speed. Specially designed for bigger and heavier riders.

## What's new!

The AllroundAIR WS 10'2" is new and comes with a windsurf mast plug. All boards are made with the most advanced Drop Stitch Technology, providing greatest possible durability and stiffness. Next to the leash D-ring at the tail, another towing D-ring is attached on the bottom of the nose. All boards are delivered as a complete package with backpack and air pump.

**Target group:** For beginners up to experts.

**Suitability:** For all conditions: flat-water up to small waves.

## CRUISAIR

Fast, very stable all-round cruising and touring boards that can be recommended for all rider levels. You will be surprised how fast these boards are. The 12'6 offers additional stability and speed because of its extra width and rather long waterline.

## What's new!

The CruisAIR WS 11'4" is new and comes with a windsurf mast plug. All boards are made with the most advanced Drop Stitch Technology, providing greatest possible durability and stiffness. Next to the leash D-ring at the tail, another towing D-ring is attached on the bottom of the nose. As well the board is equipped with a bungee cord on deck for on-board storage. The board is delivered as a complete package with backpack and air pump.

**Target group:** Board for everyone

**Suitability:** For cruising and trips.

## SPORTSTAIR

Fairly stable and very fast board. This great compromise between RACAIR and CRUISAIR is 6" thick, very stiff and damn fast. Some hard boards will not be able to keep up with this one. In flat water it works well for anybody. Advanced riders will also enjoy it in rough conditions or for down winders.

### What's new!

The SportsAIR 12'6"x27"x6" is new for more speed and advanced riders. The board is made with the most advanced Drop Stitch Technology, providing greatest possible durability and stiffness. Next to the leash D-ring at the tail, another towing D-ring is attached on the bottom of the nose. As well the board is equipped with a bungee cord on deck for on-board storage. The board is delivered as a complete package with backpack and air pump.

**Target group:** For advanced riders.

**Suitability:** Flat-water and Downwinders.

## RACAIR

This board performs pretty close to its carbon counterparts, but without all the transportation hassles. You never have to worry about trying to check in a 4-meter monster in order to get to your race, just roll it up in a backpack. Its flat bottom makes it reasonably stable for a 25" wide board.

### What's new!

The RacAIR 14'0"x25" is new to have the fastest board in a small package to travel around the world to win races. The board is made with the most advanced Drop Stitch Technology, providing greatest possible durability and stiffness. The board is delivered as a complete package with backpack and air pump.

**Target group:** For advanced riders who like to ride fast.

**Suitability:** Flat-water races.

## RIVAIR

Want to get the same rush SUPing on inland waters as the wave SUPers do on their dream breaks? A truly exciting and thrilling adventure lies ahead of you. With the RIVAIR you can go radical and hit some big foam rollers and steam down fast moving waters. Also a super stable flat-water beginner board. Due to its sharp piercing and bent-up nose it ploughs through white water. Equipped with a quad setup of 4 fixed 3'0" soft fins, it is perfect for shallow water without the risk of breaking fins. In choppy water the big centre fin provides good directional stability.

The board is made with the most advanced Drop Stitch Technology, providing greatest possible durability and stiffness. For reasons of precaution in shallow water, the towing D-ring is attached on the deck of the nose. Next to the standard leash D-ring at the tail, the board is equipped with a bungee cord on deck for on-board storage.

**Target group:** For flat-water beginners up to white water experts.

**Suitability:** Flat-water, rivers and white water.

Size	Technology	Length	Width	Volume	Weight	US Box	Code	SRP €*
9'6" x 35" x 6"	inflatable	289	89	290	9,9	9'0" PE remov+4 side fin 3'0"	251089	1.199,00

NEW

## ADVENTURAIR

### What's new!

This big boy will take you, your kid, a cooler and some fishing gear on an adventure without breaking a sweat. We took the RIVAIR concept and injected it with some serious growth hormones. A wide array of bungee straps, D-rings, Scotty mounts and handles make the ADVENTURAIR a Swiss-Army knife of paddleboards. Will it be a level 5 white water descent or an easy Sunday fishing trip? It is up to you.

The quad setup with four 3" short soft fi ns make sure you can go into those shallow river pockets, or you can add a center fi n for added traction. A great tender for boat owners capable of transporting serious loads.

**Target group:** For everyone and families who like touring and cruising.

**Suitability:** Everywhere except waves.

SUP

## SUP POLYETHYLEN USA

Our plastic boards are extremely durable, perform great and have great outfitting features in an affordable price range. They are hollow boards constructed similar to a plastic kayak, and tend to be heavier than epoxy or inflatable boards. There is a reason that plastic is the number one material for all kayaks on the water.

Gur plastic boards are made using a complex blow molding process that allows us to use 20% post consumer recycled content and form a , 00% recyclable product. We like this, and so does the ocean.

## SURFER – SIMPLE & VERSATILE

Wide, stable and easy, it will get you out on the water and feeling comfortable faster than any other board. The Ultimate do anything board-lakes, rivers, oceans-the Surfer is at home in all waters. Made from blow molded polyethylene, this is one tough and durable board. Lend it to a friend or let the kids and their friends have free reign without worrying about each scratch and ding. Family friendly, easy to paddle and priced right. Comes with comfy full deck EVA pad, lockable pass through front handle, side and tail handles, front bungee, Snap in 9' fin. Available in three colors: Green, Yellow, and Orange.

- Features:**
- Blow Molded Polyethylene hull
  - Full EVA Deck Pad
  - Front Deck Bungee
  - Pass lthrough Front Handle
  - Side and lail Carry Handles
  - 9“ Snap in Fin

## ANGLER - GET HOOKED

The Angler is the most versatile fishing SUP board on the market. Wide and stable, it will let you stand and cast with ease,or you can flip up the built in seat-back, take a seat, and land your catch with ease. The Angler is outfitted with four fishing rod mounts, two rod holders, and two drag-anchor cleats. Stable and versatile with plenty of rod configurations and made from super tough blow molded polyethylene.

- Features:**
- Blow Molded Polyethylene Hull
  - Full EVA Deck Pad
  - Built-in Seat Back - Provides extra support while landing your catch
  - Two Storage Hatches
  - Cargo Bay
  - Front and Rear Gear Bungee
  - Two Paddle Holders
  - Four Carry Handles

TOP  
SELLER

## 60% CARBON

Brandnew! 100% Carbon CNC shaped high density PVC core blade with a 60% Carbon shaft is a great performance paddle. We kept them "swing weight" low by using the full carbon blade. The 60% Carbon shaft is a better option for those looking for a slightly forgiving feel at a really low weight predominantly in waves or touring. The dihedral foiled blades feature a generous ABS edge for the protection of your board and the blade. The handles are made of 100% Carbon, the Cut-To-Length handle is covered with a comfortable EVA.

JP SUP Glass Paddle 3-piece adjustable	160 – 220 cm	90 in²	251117	<b>199,95</b>

## GLASS PE

Brandnew!

This combination of a light fiberglass shaft and a tough fiberglass reinforced Polyethylene (PE) blade is a great alternative to heavy alloy paddles. Due to the longitudinal structural reinforcements, the PE blades are very light but also very stiff. They also feature a soft rubber edge for protection. ABS handle. The shafts have a horizontally roughened surface for a good grip.

## FEATURES

**360° Power Strap**

360° strap made from highly elasticised fabric that adapts to body shape providing additional core support.

**Back Base Support System**

An ergonomically designed PE board insert and built-in lumbar support offer optimal comfort, stability and predection.

**Anti-chafe Seams**

Hidden stitches on the inner back and hip area to avoid chaffing.

**Contoured EVA Inner**

Used on the inside of harnesses for impact and vibration resistance with very low water absorption. The unique embossed pattern is designed to perfectly fit the core while preventing the harness from riding up or twisting.

**Soft Neoprene Edges**

Neoprene padded edges allow for greater comfort in all conditions, especially freestyle.

**Laminated EVA Inner**

An EVA inner with a jersey lining providing a comfortable layer between your body and the harness.

## S1 SPREADER BAR

Designed by men. Built by machines! S1 is the world's first spreader bar constructed entirely out of forged aluminum. To design the ultimate harness we started by looking at the spreader bar, the most essential part of a harness and the link between you and your equipment. Working closely with pro riders, our design team explored numerous material and construction combinations and used finite element analysis to work out dynamic loads, finally settling on

forged aluminum construction for best strength to weight balance and anti-corrosion properties. Stronger and lighter than any other spreader bar available, the S1's unique shape allows for an even load distribution. A smooth finish with no sharp edges completes the unique design. Available in both standard and EZ Release constructions.

\*VAT netherlands and belgium: 21% All prices in Euro. Subject to modifications. Attention is drawn to the general payment and delivery conditions.

## KITE / WIND

## CONVERTIBLE HARNESS SYSTEM

No matter which sport you partake in, now you can have one harness that does it all. Select the harness body you prefer and a spreader bar kit for your sport. Whatever your ride, keep that thirst alive.

## STEP 1

## SELECT HARNESS BODY

Select your harness body. Handle pass leach is removable.

## STEP 2

## SELECT SPREADER BAR

KITE

WIND

Select either the kitesurfing bar/pad or the windsurfing bar. Or go for both so that you can use the same harness for both sports.

**S1 SPREADER BAR EZ SET**

(W/PAD, KNIFE, & SAFETY LINE ATTACHMENT)

- Ergonomically shaped pad with extra padding for comfort and predection
- Rounded shape hook with a deep curve allows the chicken loop to attach securely reducing the chance of accidental unhooking
- Three attachment points to the spreader bar for maximum strength and stability
- Compatible with most chicken loops and security pins

**SI SPREADER BAR EZ**

- Straight and narrow hook for maximum stability at high speeds
- Angle designed for easy hooking and unhooking in wave sailing
- Three attachment points to the spreader bar for maximum strength and stability

Standard	C1 black/ charcoal	XS-46/ S-48/ M-50/ L-52/ XL-54	146015/KH0077	139,90

3D WAIST HARNESS

The 3D offers maximum support due to its unique pre-bent shape that comfortably wraps around your body. The Back Base system provides support where it's needed most, while the cushioned interior matches the concave shape of your lower back perfectly.

- Features:
- Soft neoprene edges
  - Anti-chafe seams
  - Back Base support system
  - 360 Power Strap
  - Laminated EVA inner for comfort
  - Replaceable straps
  - S1 spreader bar

SLIDING BAR

The sliding bar allows your body to twist while keeping the harness in place

- Provides full range of motion as the spreader bar slides from side to side
- Allows you to shift your body weight according to the wind direction

## S1 SPREADER BAR

The S1 is constructed entirely out of forged aluminium to provide the best strength and weight balance and anti-corrosion properties. Special analysis and extensive testing on the water resulted in a stronger and lighter bar than any other spreader bar available. The S1's unique shape allows for an even load distribution.

HARNESSES

FIXED HARNESS LINES

THE ONE HARNESS

A Star is born. With just the right amount of support, the One waist harness is purpose built for the smaller frame of kids and ensures comfortable sailing for beginners and aspiring stars. The One adds additional peace of mind for your loved ones by incorporating a “FIND ME” safety whistle attached to the harness, for use in emergency situations.

- Features
- 360 Power Strap
  - Back Base support system
  - 3D shaped neoprene foam inner
  - Non-water absorbent PU outer
  - Soft neoprene finished edges
  - Deep inner seams to avoid chafing
  - FIND ME safety whistle
  - Stainless steel spreader bar

EXPERIENCE

Experience is easy and fun to use for all ages and levels. It is light, easy to handle and highly durable. All Experience sizes are perfect for schools and learning with the larger sizes specifically designed for SUP sailing. They have a size-specific batten layout with no foot-batten allowing the sail to smoothly transition from tack to tack without any rotation. There are 2.5 battens in the 2.5, 3.5 and 4.5 and 3.5 battens in 5.5 and 6.5. Full Dacron® construction in the top for softness, durability and ease of use. Perfect for learning and schools. Heavy duty ArmourWeb Construction making the sail more responsive and ideal for SUP sailing. The front of the window is completely clear for optimum visibility and a soft profile. ClearWeb used for draft stability.

DRAGONFLY

Dragonfly is designed to provide optimum performance for both beginner and advanced youth sailors. Dragonfly has the same features, durability and appearance of all NeilPryde sails but is lighter and easier to handle. The 1.5 and 2.0 have two battens for minimal weight; 2.5 and up have three battens for stability. Easy rigging through minimal downhaul tension. A high foot angle helps during up hauling and manoeuvring the board. Lightweight and highly durable.

Size	Colour	Code	SRP €*
1.5	light grey/ green / orange	151111	329,00
2.0	light grey/ green / orange	151111	349,00

3.5	light grey/ green / orange	151111	399,00

DRAGONFLY MAST

These composite masts have been designed to work best on the Dragonfly sails. Their construction is similar to our adult mast program but with a specialised, custom lay-up. A combination of fiberglass and carbon fibre is used to ensure this mast is strong, light and affordable.

Lenght	Code	SRP €*
240	122007	179,00
290	122007	179,00

DRAGONFLY BOOM

With special thin grip this boom is perfectly suited for small hands with big ambitions. This boom has a 'new school' outline which is simply scaled down to ensure the Dragonfly rig works in perfect synergy.

Lenght	Code	SRP €*
100-140	142105	89,00
120-170	142105	99,00

DRAGONFLY 30CM RDM

As with other Dragonfly components, this extension is specifically designed to suit. Due to a lower load specification we have been able to reduce the weight when compared to our regular RDM extension while still keeping the same high quality features such as the clamp shell and high quality anodising.

Lenght	Code	SRP €*
30	122207	75,00

JP YOUNG GUN QUAD ES

We developed the Young Gun boards with the special needs of the new generation in mind. They come with a reduced stance width and a shorter distance between footstrap plugs for more narrow feet and also with many different footstrap options for youngsters of all sizes and sailing levels. They work for young guns up to around 50 kilos.

**QUAD:**  
A 55 liter version of Kauli Seadi's and Jason Polakow's latest development together with Werner Gnigler - our famous shaper.

**Technology:**  
EPOXY SANDWICH Technologie (115 with EVA Deck)

Liter	Colour	Code	SRP €*

YOUNG GUN 8‘10“X30“

On the Young Gun kids will learn how to paddle around in 2 minutes and will be sailing in and out by themselves within two days. The width, length, volume and the soft deck technology (no hard edges) combined with the centre fin make it a perfect windsurf beginner board for kids up to 40kg. At the same time it is an ultimate all-round kid's SUP for flat-water and waves.

**Target group:** Young Guns

**Suitability:** Flat water, wave and windsurfing beginners.

Liter	Colour	Code	SRP €*
8'10"x30"	blue	251055	999,00

YOUNG GUN PADDLE

Specially developed alloy paddle for the needs of the kids. Due to its 18 cm wide blade and the light and shorter shaft, the young gun is the perfect paddle for kids. The small outline of the paddle provides an easy and forgiving paddle stroke. The power face of the blade features a flat shape that merges into a convex shape. The backside of the paddle transfers into a soft double concave V. Due to its double pin system closure, the alloy paddle can be adjusted to the individual length.

Length	Colour	Code	SRP €*
70	black	231104	89,95

JP PADDLE - GLASS PE

This combination of a light fiberglass shaft and a tough fiberglass reinforced Polyethylene (PE) blade is a great alternative to heavy alloy paddles. Due to the longitudinal structural reinforcements, the PE blades are very light but also very stiff. They also feature a soft rubber edge for protection. ABS handle. The shafts have a horizontally roughened surface for a good grip.

Paddle surface area	Colour	Code	SRP €*
90	black	251119	119,95

JP PADDLE - GLASS

The full composite fiberglass construction provides performance at great value. Fiberglass flexes naturally and is therefore easy on your shoulders and back. The stringer inside the blade creates stiffness while the full fiberglass pressure molded blade is leak proof. ABS handle. The shafts have a horizontally roughened surface for a good grip.

NEW

## MULTI WAVE Slot Box

New fins with a slightly wider base offer more grip and drive. Thus, the length of the fins could be reduced adding to a better feel and maneuverability of the new boards.

## SIDE FIN Mini Tuttle Box

Two supplementary fins positioned on the rail help to track and guide with their main purpose to provide additional grip in extreme turns. When railing up the board hard, the tail starts to come out of the water, for example during top turns (which then become lip slides) and also in extreme bottom turns. In these extreme situations centre or twin-fins may come out of the water but one of the Side Fins will still grip! These Side Fins feature a balanced outline and a straight race curve. They feel more direct and allow more radical turns. The shape is positioned right between the Polakow and Kauli line and therefore suits both fins perfectly.

## WAVE US-BOX

Based on the concept of the Polakow Twinser fins: The innovative outline and profile make every board feel much more direct and responsive. The fin alone makes every board more radical in every aspect, no matter if it's used in single fin or in thruster mode. The fin is faster than traditional wave fins and helps you to get out through the break quicker. With only little area at the tip the fins are super easy to control.

## FREESTYLE WAVE POWER BOX

The fin range based on the shape of the Wave and Polakow Twinser line. The new outline and profile make all manoeuvre oriented boards feel much more direct and responsive resulting in dramatically improved manoeuvrability. It is faster than traditional, dolphin style FSW fins. It helps get planing earlier and accelerates much quicker. The perfect fin concept for the FSW board range.

## FREESTYLE POWER BOX

These fins combine power and manoeuvrability in a short, small “new School” freestyle foil. Their shortness makes the boards feel very responsive and provides great manoeuvrability - it is also essential for sliding freestyle tricks. Less area is made up for with a steeper rake angle. The profile length is short for better manoeuvrability and quicker reaction to footsteering. Radical designs for radical manoeuvres.

## FREERIDE POWER BOX

These designs deliver a lot of lift, offering clearly more performance than the average freeride designs on the market. The wide base creates efficient power in light winds. The thin tip provides control when the wind picks up. Due to only little drag, the Freerides are comfortable and easy to sail at higher speeds. Initiating turns is easy and effortless. These fins feature an excellent blend of ease, manoeuvrability and control, yet remain very powerful.

## RIDE G10 CNC POWER BOX

The transfer of the Polakow Twinser fin concept into the Freestyle Wave line was so successful that we took it to the freeride segment. The new outline in combination with the thinner profile results in less drag and consequently more speed and better top end control. The new fins develop an enormous amount of lift and push the rider onto the plane instantly. These fins make the boards feel more responsive and improve their manoeuvrability. Every advanced freerider can tune up his boards with these new fins, making them faster and more manoeuvrable in all conditions!

## SUPER SPORT POWER BOX

The shape of the new JP Slalom fins now available for Powerbox boards! Test showed that the new line of Super Sport boards work excellently with the new Slalom fin shape (see further left) and improve their performance. Their great performance, partnered with little resistance and great control can make every Powerbox board faster. Recommended for every performance-oriented board with Powerbox.

## SUPER LIGHTWIND CARBON DEEP TUTTLE BOX

This design is positioned in between a SL and Formula fin. Wide base and parallel tip for maximum efficiency in light wind. Top speed is guaranteed because of the thin profile that only the moulded technology allows us to use. Special layup makes the fin perform in a way that we can take advantage of the foiling effect (known form formula fins) and controlled twist for comfortable high speed runs. This fin is the ideal tool for the SLW boards.

600	Carbon	242060	<b>259,00</b>

SPEED TUTTLE BOX

Designed for top speed on a reach. The profile thickness and the profile length (cord length) are kept at their minimum, resulting in least drag and optimum downwind speed. With good twist they provide excellent control at top speed. The profile with the wide point slightly further back produces less drag and creates even lift throughout the whole wind range. The constant twist and flex makes the fin very predictable and provides amazing control and top speed without lifting the nose out of the water.

280	G10 CNC	242061	149,00

SLALOM TUTTLE BOX (52 – DEEP TUTTLE BOX)

Designed for top speed on all tracks. The profile thickness has been reduced further and the cord length shortened, resulting in less resistance and better performance. The fins reach high speeds and provide more control when overpowered. The widest point quite far back on the profile produces little resistance and creates even lift throughout the whole range. The constant twist and flex make the fin predictable, providing amazing control and top speed without lifting the nose off the water.

WEED (SEAWEED FINS) US & POWER & TUTTLE BOX

The right rake angle is the key to this design: Seaweed, plastic bags a.s.o. simply slip past. Additionally, the rake angle ensures smooth entry into turns. The material, the slim profile and the efficient shape make them very fast designs. Their areas are quite large offering enough lift for easy planing. The new Weed Slalom fins have an even slimmer profile to reduce their resistance and increase their performance. Also note the enormous length and area of these fins – there are not many weed fins that big available on the market!
